# 1. Introduction

This *report* recapitulates the results obtained within the MobiNetVideo project. The results are announced as they are obtained at the Web site (<http://www-vpu.eps.uam.es/MobiNetVideo>).

## 1.1. Document structure

This document contains the following chapters:

- Chapter 1: Introduction to this document
- Chapter 2: Publications
- Chapter 3: Project Documents
- Chapter 4: Content Sets
- Chapter 5: Workshops and Seminars
- Chapter 6: Overview of project progress
- Chapter 7: Main achievements of the project

## 2. Publications

### 2.1. Journals

### 2.2. Book Chapters

### 2.3. Conferences

- [1] Zhu P. et al., “VisDrone-VDT2018: The Vision Meets Drone Video Detection and Tracking Challenge Results”, in Computer Vision – ECCV 2018 Workshops. ECCV 2018, L. Leal-Taixé, S. Roth (eds.) Lecture Notes in Computer Science, Vol. 11133. Springer, Cham, 2019, pp. 496-518. (ISBN 978-3-030-11020-8) (DOI [10.1007/978-3-030-11021-5\\_29](https://doi.org/10.1007/978-3-030-11021-5_29))

- [8] Re-identificación de personas (People re-identification), Daniel Sáez García (advisor: Álvaro García-Martín), Trabajo Fin de Grado (Graduate Thesis), Grado en Ingeniería de Tecnologías y Servicios de Telecomunicación, Univ. Autónoma de Madrid, Jul. 2019.

## 3. Project Documents

### 3.1. First 19 months Deliverables

#### 3.1.1. D1.1 “System Infrastructure” version 1 (December 2018 - delayed July 2019)

This deliverable describes the infrastructure available at VPULab for the development of the tasks proposed within the MobiNetVideo project (TEC2017-88169-R. Describing both the available hardware for video sequences acquisition (“Acquisition infrastructure”) and the hardware and software environments for data processing and analysis (“Processing infrastructure”).

#### 3.1.2. D1.2 “Camera simulation” version 1 (December 2018 - delayed July 2019)

This deliverable describes the work related with the task T.1.2 Cameras network simulation which supports other tasks for generating test data. We focus on the simulator “Multi-camera System Simulator (MSS)” to describe its structure and the developed features within the context of this project. Moreover, we also integrated other developments for the MSS simulator.

#### 3.1.3. D1.3 “Evaluation datasets” version 1 (December 2018 - delayed July 2019)

This deliverable describes the work related with the task T.1.3 “Generation of datasets. Support to other tasks for generating test data and defining evaluation methodologies”. It includes the selection of appropriate datasets (sequences and associated ground-truth) and the ones generated within the project. Additionally, the evaluation methodologies used for the evaluation for the project algorithms and systems is also described.

#### 3.1.4. D2 “Feasibility studies: algorithms and findings” ((September 2018 - rescheduled March 2019 - delayed July 2019)

This deliverable describes the work related with tasks T.2.1 People tracking for active vision, T.2.2 Object detection for collision detection, T.2.3 Scene categorization for lifelogging and T.2.4 Multi-target tracking for UAV monitoring.

All these WP2 tasks aim at performing a study of current technologies for applications related to heterogeneous camera networks where camera mobility plays a key role. Such studies are performed on public datasets. The main objective is the identification of suitable state-of-the-art video analysis tools (e.g., segmentation, tracking and detection),

by the implementation and evaluation of their performance in single mobile cameras for use as a baseline for comparison with the achievements to be developed within WP3 and WP4.

The technologies covered by the deliverable are:

- People tracking for active vision
- Object detection for collision detection
- Scene categorization for lifelogging
- Multi-target tracking for UAV monitoring

### **3.1.5. D3 “Technologies for mobile camera networks” version 1 (June 2019 – rescheduled July 2019 – rescheduled September 2019)**

*This deliverable was rescheduled to September 2019 in July.*

This deliverable will describe the new technologies developed within WP3 for applications related to heterogeneous camera networks where camera mobility plays a key role, covering different areas grouped in WP3 tasks:

- T.3.1 Scene Recognition
- T3.2 Semantic Segmentation
- T3.3 Multi-view matching
- T.3.4 Cooperative detection and tracking

### **3.1.6. D5 “Results Report” version 1 (September 2018 - rescheduled December 2018 - cancelled December 2018)**

### **3.1.7. D5 “Results Report” version 1 (July 2019)**

This document presenting the results achieved during the first 19 months of the project.

---

## 3.2. Future Deliverables

3.2.1. D1.1 “System Infrastructure” version 2 (December 2019, if required)

3.2.2. D1.2 “Camera simulation” version 2 (December 2019)

3.2.3. D1.3 “Evaluation datasets” version 2 (December 2019, if required)

3.2.4. D5 “Results Report” version 2 (March 2020)

3.2.5. D3 “Technologies for mobile camera networks” version 2 (June 2020)

3.2.6. D1.1 “System Infrastructure” version 3 (December 2020, if required)

3.2.7. D1.2 “Camera simulation” version 3 (December 2020)

3.2.8. D1.3 “Evaluation datasets” version 3 (December 2020, if required)

3.2.9. D4 “Deployment and application scenarios” (December 2020)

3.2.10. D5 “Results Report” version 3 (December 2020)

## 3.3. Technical Reports

---

## 4. Content Sets

- A Lifelogging Scene Recognition dataset (to be published September 2019)
- A Unified Semantic Segmentation dataset (to be published September 2019)

---

## 5. Workshops and Seminars

## 6. Overview of project progress

The provisional announcement of project approval arrived in the first days of 2018, but the official project approval was not published till mid-June, allowing to start the official opening of the project at the university. Whilst waiting for the notification of definitive approval, we have been working in the lines described in the proposal, but without being able to work with financial support.

During the first year (in July and September), the workplan suffered several adjustments:

- D2 and D5v1, as well as the first Newsletter, were delayed
- M1.1 and M1.2 were delayed.
- WP2 tasks were extended till M15 and all milestones and deliverables have been scheduled for the end of WP activities.
- With respect to WP5, the first developers' workshop has been cancelled and D5v1 (this document) rescheduled to September 2018), was finally cancelled, being the first version scheduled June 2019.

Vaelsys joined as Registered Observer in October 2018. Vaelsys is a Spanish company devoted mainly intelligent video analysis. Vaelsys mission is to allow businesses from diverse sectors to take advantage of the opportunities offered by the wealth of data generated daily by video cameras.

During the third semester, the first set of deliverables (D1.1 "System Infrastructure" version 1, D1.2 "Camera simulation" version 1, D1.3 "Evaluation datasets" version 1, D2 "Feasibility studies: algorithms and findings", and D5 "Results Report" version 1 - tis document-) as well as Newsletter#3 were finally rescheduled and published July 2019. Deliverable D3 "Technologies for mobile camera networks" version 1, has been delayed from July 2019 to September 2019.

Considering this Results Report, we will work on potential new changes to the workplan and project schedule early September.

## 7. Main Achievements of the Project

### 7.1. First 18 months main achievements

#### 7.1.1. WP1: Infrastructure and datasets

- T1.1: Infrastructure update and maintenance
  - Acquisition and configuration of new hardware for GPU-based processing of image and video signals (Deliverable D1.1)
  - Acquisition and configuration of new hardware for research activities on “People Tracking for Active Vision” of WP2 and WP3 (Deliverable D1.1)
- T1.2: Cameras network simulation
  - Integration of previous research on simulation of camera networks using the Unity3D game engine. Generation of documentation for the integrated project. (Deliverable D1.2)
  - Design of an API using Python and Matlab. On-going Implementation and testing.
- T1.3: Generation of datasets
  - Development of a tool for the extraction of images from the Google Street View database through predefined routes, using the Google Directions and Street View APIs [5].
  - Compilation of existing datasets for multi-target tracking from UAV-based video sequences. (Deliverable D1.3)
  - Compilation of existing datasets for scene recognition in still images. (Deliverable D1.3)
  - Aggregation of existing datasets for semantic segmentation, creating a unified dataset. (Deliverable D1.3)
  - Creation of a new dataset datasets for scene recognition in life-logging videos. (Deliverable D1.3)

#### 7.1.2. WP.2: Feasibility studies

- T2.1: People tracking for active vision
  - Adaptation of a people detection system for omnidirectional cameras to deep learning descriptors [6].
- T2.2: Object detection for collision detection
  - Evaluation of state-of-the-art in people detection methods with a wearable camera. (Deliverable D2.1).
  - Evaluation of state-of-the-art in people re-identification methods [8].
  - Evaluation of state-of-the-art in car re-identification methods [4].
  - Development of a people detection approach in presence of groups with CNNs [7].
- T2.3: Scene categorization for life-logging
  - Evaluation of state-of-the-art object detectors in Google Street View images obtained with the tool developed in T1.3 [5].

- Evaluation of state-of-the-art scene recognition methods in still images [3].
- Evaluation of state-of-the-art semantic segmentation methods in life-logging videos compiled in T1.3. A Graphical User Interface has been designed to ease results' understanding. (Deliverable D2.3).
- Evaluation of state-of-the-art scene recognition methods in life-logging videos compiled in T1.3. A Graphical User Interface has been designed to ease results' understanding. (Deliverable D2.3).
- Adaptation of a convolutional neural network visualization tool for accounting scene recognition learning process. (Deliverable D2.3).
- T2.4: Multi-target tracking for UAV monitoring
  - Generation of a framework for evaluating algorithms multi-target tracking (developed in Python or Matlab) on existing datasets or custom datasets and using standard evaluation protocols (Deliverable D2.1).
  - Evaluation of selected state-of-the-art approaches using the VisDrone dataset and CarPK dataset captured from drones (Deliverable D2.1).

### 7.1.3. WP.3: Enabling technologies

- T3.1: Scene identification
  - Development of a framework for scene recognition in Python which combines semantic and appearance deep features by means of an attention module in an end-to-end multi-modal CNN.
  - Implementation of evaluation protocols to estimate scene recognition performance.
- T3.2: Semantic segmentation
  - Development of a framework for semantic segmentation in Python to allow the learning of the unified semantic segmentation dataset.
- T3.3: Multi-view matching
  - Development of a framework for multi-camera object re-identification
  - Implementation of evaluation protocols to estimate object re-identification performance
  - Participation [2][4] in the AICity challenge 2019 (CVPR workshop Challenge Track 2: City-Scale Multi-Camera Vehicle Re-Identification) <https://www.aicitychallenge.org/2019-data-sets/>.
- T3.4: Cooperative detection and tracking
  - Development of a framework for single-camera Multiple-Object-Tracking in Python which employs spatial and appearance (deep) features.
  - Implementation of evaluation protocols to estimate single camera multiple-object tracking performance.
  - Participation[1] in the VisDrone challenge 2018 (ECCV workshop) <http://aiskyeye.com/>.
  - Development of a framework for multi-camera Multiple-Object-Tracking in Python which employs spatial and appearance (deep) features.
  - Implementation of evaluation protocols to estimate multicamera multiple-object tracking performance

- Participation [2] in the AICity challenge 2019 (CVPR workshop)  
<https://www.aicitychallenge.org/2019-data-sets/>.

#### **7.1.4. WP.4: Deployment of applications**

No activity was planned during the first 18 months of the project in this workpackage tasks.

- T4.1: Case studies: implementation and testing
- T4.2: Real-time and network issues
- T4.3 Sensor issues

#### **7.1.5. WP.5: Management and dissemination**

- T5.1: Management
  - During the first 18 month, several workplan updates have been done due to the disarrangements caused by the delay in the project kick-off and the resolution of the FPI scholarship.
- T5.2: Dissemination
  - The web page was created and it is being updated timely.
  - Three MobiNetVideo Newsletters were published.
  - As expected, the number of results ready for publication during this period is limited. A detailed plan will be done early September.
- T5.3 Workshop organization
  - The 2018 Developers Workshop was cancelled. Currently, we are evaluating the planning of such workshops for the rest of the project.
